

|CRP| (range bins 15:K, image-style metrics) and |ADC| (IFFT_r of VR-corrected masked CRP, radar time-series metrics). GT range FFT uses Hann window (matches trainer). Panels normalized to their own peak (dB, -40\,dB floor). $|\rho|^{\text{VR}}$ is the complex correlation after joint per-VA α + per-range β LS calibration removal; σ_ϕ is magnitude-weighted phase RMSE in degrees.
