

[CRP] (range bins 15:K, image-style metrics) and [ADC] (IFFT_r of VR-corrected masked CRP, radar time-series metrics). GT range FFT uses Hann window (matches trainer). Panels normalized to their own min-max [0, 1]. $|\rho|^{VR}$ is the complex correlation after joint per-VA α + per-range β LS calibration removal; σ_ϕ is magnitude-weighted phase RMSE in degrees.
